

DATE: 5/16/2017

FARM: RUNNYMEDE FARM

NAME: ONE IN A ROMP 16

DOCTOR: DH Rodgerson, DVM, MS, Diplomate ACVS

LF Fetlock: Not Radiographed

RF Fetlock: Not Radiographed

LH Fetlock: Irregular plantar medial and lateral proximal P1. Previous fragments off dorsal aspect of fetlock and sesamoid fragments are gone. The back of P1 will still be slightly irregular in the future.

RH Fetlock: Not Radiographed

Left Knee: Not Radiographed

Right Knee: Not Radiographed

Left Hock: Healing OCD lesion distal intermediate ridge of tibia. The lesion is large and appears to be healing. There is no swelling in the joint and removal runs the risks of developing a bog. I would not remove and long term prognosis is very good for racing. If a bog develops than reevaluate.

Right Hock: Healing OCD lesion distal intermediate ridge of tibia. Looks better than last set of films. No surgery needed.

Left Stifle: Not Radiographed

Right Stifle: Not Radiographed

** NSF= No significant radiographic findings.*

Comments:

The above expresses the opinion of the examiner based on results and findings by the examiner at the time of the radiographic examination. This opinion is rendered only to the party requesting said examination and may not be relied upon by any other party. Results of examinations of this nature and the opinion expressed shall not carry with it any warranty of guarantee of any other kind, expressed or implied.
